What is the Well Screening?

What is the Well Screening?

Now exclusively distributed by Brookes, the **Well Screening®** tool is your quick, reliable, and comprehensive way to identify kindergarten students (ages 4–6) who are at risk for learning disabilities, including developmental language disorders, dyslexia, attention-deficit/hyperactivity disorder (ADHD), dyscalculia, and speech sound disorders.

With just one 20-minute screener, speech-language pathologists (SLPs), special educators, and school psychologists can examine student performance in multiple skill areas that predict their future success in school.

Domains Evaluated

**Receptive
Language**

**Expressive
Language**

**Social
Communication**

**Early
Literacy**

Reading

Attention

**Math
Calculation**

**Speech Sound
Production**

Domains Evaluated

Receptive Language

Understanding and processing language when listening and reading

Expressive Language

Retrieving and formulating language when speaking and writing

Social Communication

Using verbal and nonverbal communication in various social contexts

Early Literacy

Learning letter names and their sounds, rhyming, and sound play

Domains Evaluated

Reading

Blending sounds into words (decoding) with fluency and comprehension

Attention

Maintaining focus and regulating behavior to learn and store information

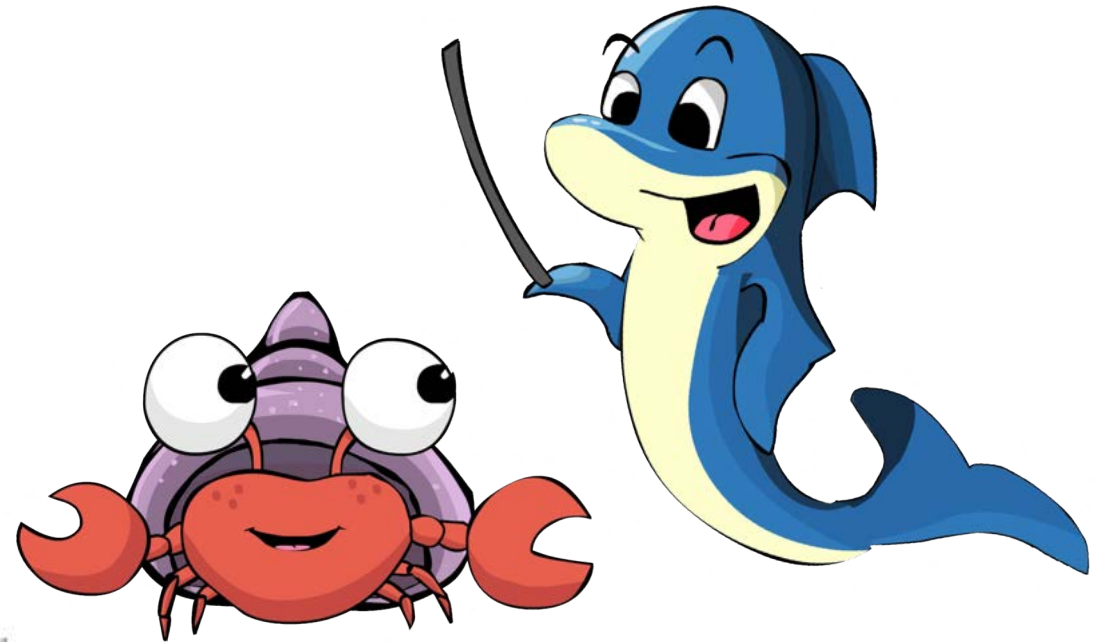

Math Calculation

Counting, grouping objects, and calculating simple math facts and operations

Speech Sound Production

Producing speech sounds that are appropriate for age and dialect

Benefits

Benefits of the Well Screening

Identifies at-risk students early, so that further evaluation and intervention can be provided as soon as possible.

Covers areas missed by other screeners—looks at many domains that research identifies as important for school success.

Pinpoints specific strengths and weaknesses in areas that matter most for academic success.

Fun and engaging, with animated characters that kids love to interact with.

Benefits of the Well Screening

Easy for adults to administer and score.

Digital-only format that can also be delivered via Zoom or another video interface.

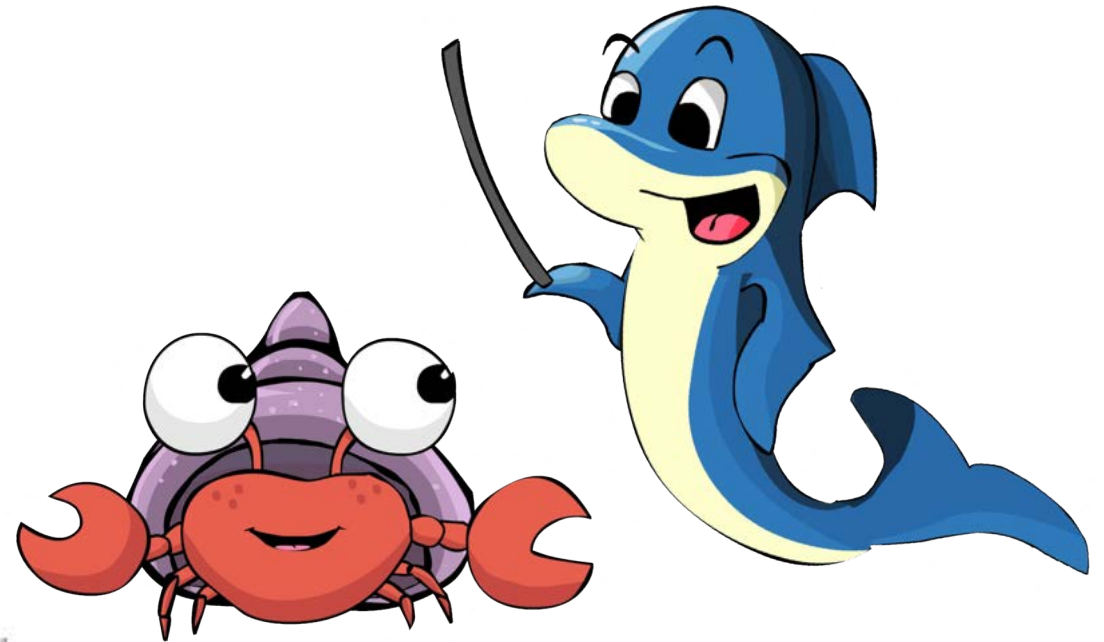

Backed by more than 30 years of clinical experience and drawn from multiple specialized fields: speech-language pathology, education, psychology, and child development.

Great for monitoring—can be used to follow the child's progress in the fall, winter, and spring of the kindergarten year.

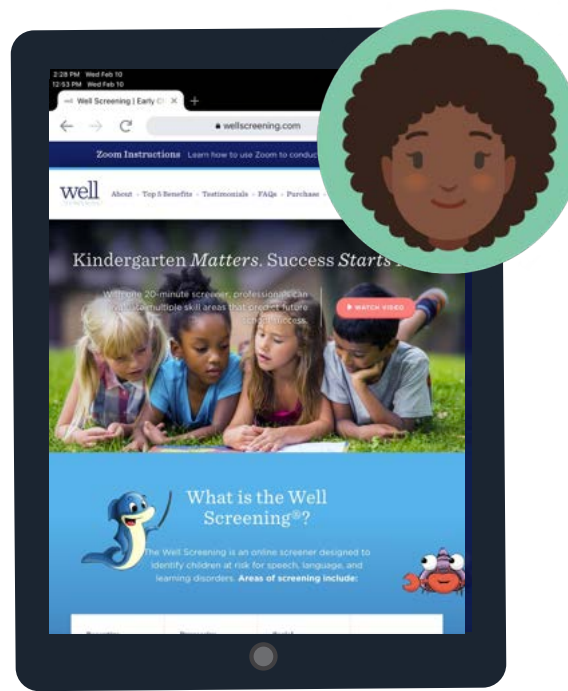

How it Works

1

Prepare devices for screening

Visit www.wellscreening.com on the student's device and on the adult helper's device.

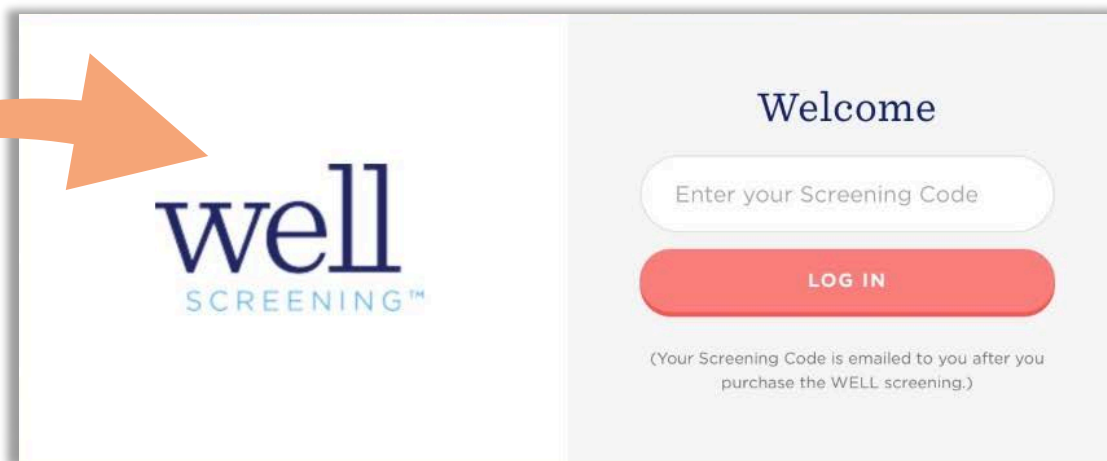

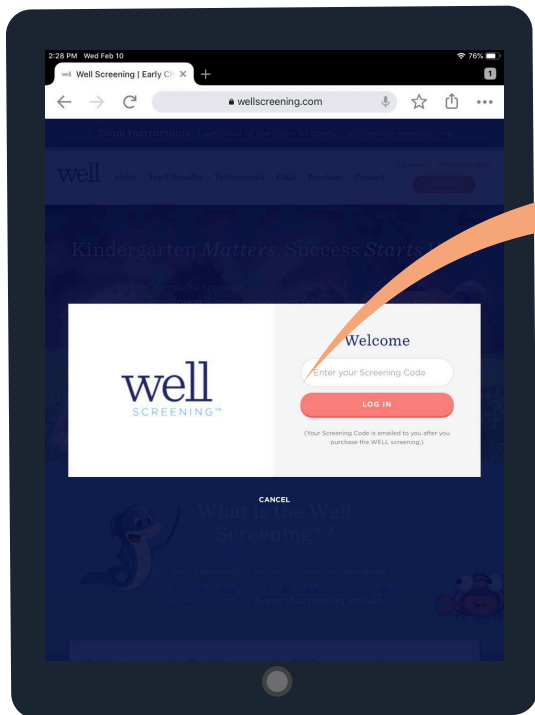

Device Options		
	Student Device	Helper Device
Computer	✓	✓
Tablet	✓	✓
Smart-phone		✓

2

Enter a screening code

On both devices, click “Login” and enter the same screening code. Then, select “My Screening.”

3

Begin screening

Animated characters guide the student through each subtest. Screening takes about 20 minutes.

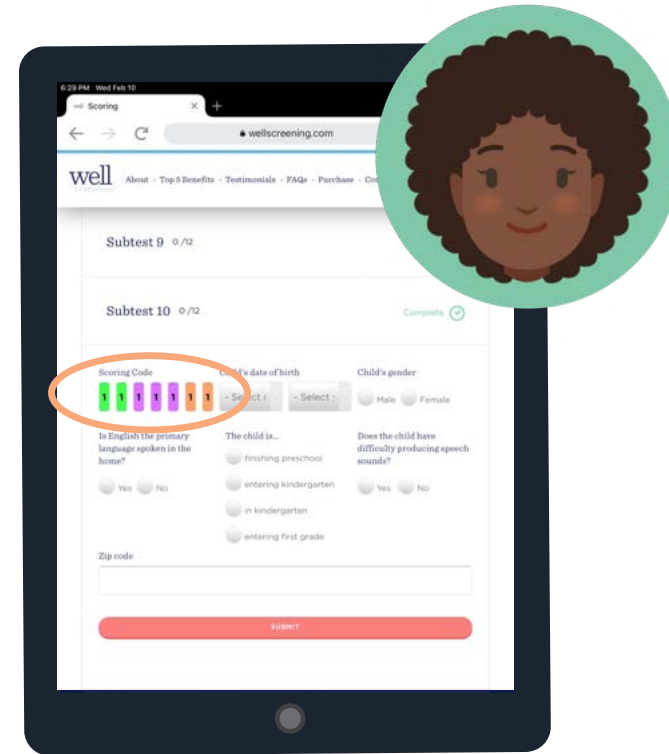

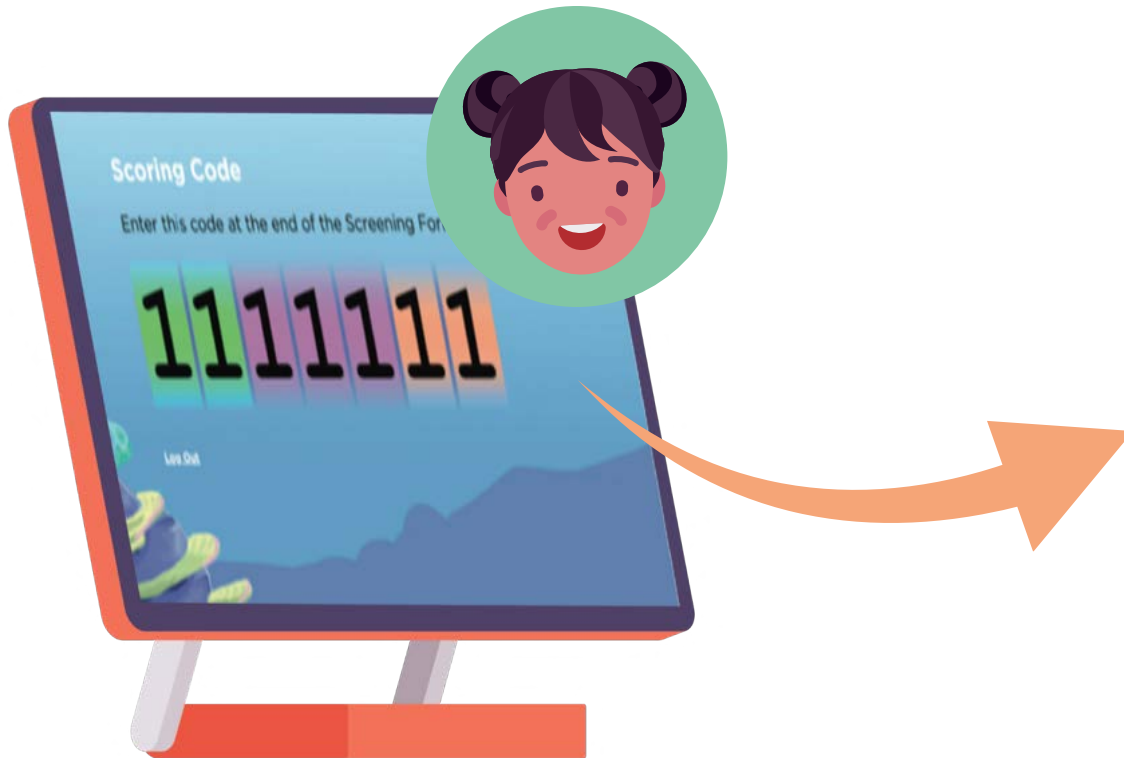

For select subtests, the adult helper marks the student's responses on the scoring form.

4

End and submit screening

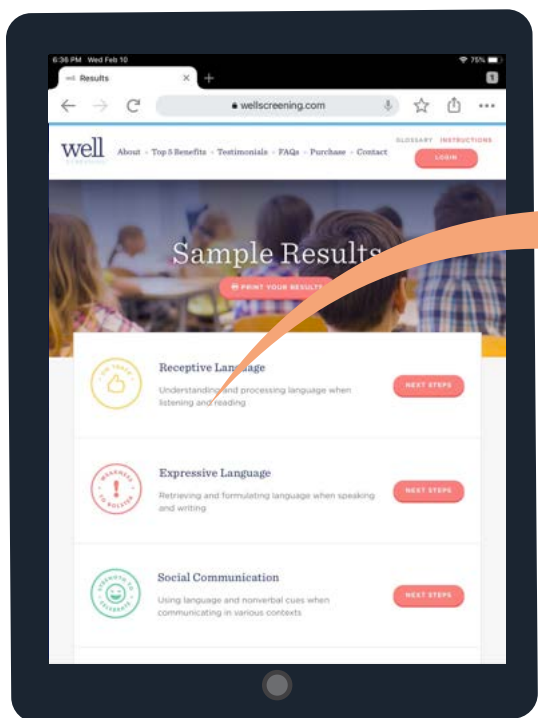

When complete, a scoring code will appear on the student's device. Enter it on the scoring form.

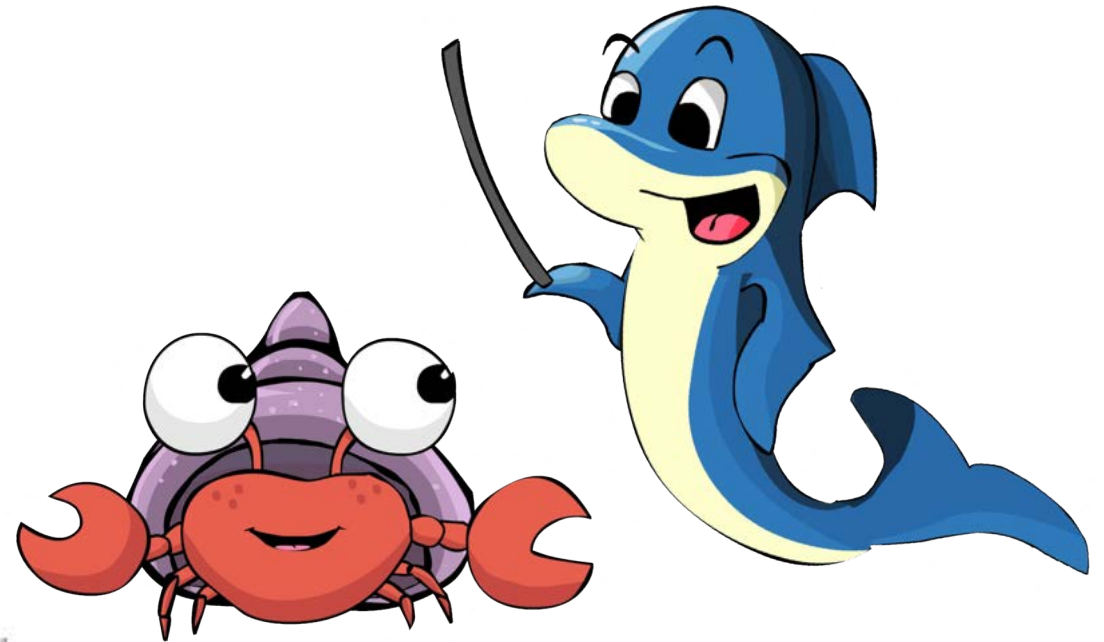

5

View results

The student's Learning Profile will automatically generate. "Next Steps" link to games, activities, and websites to bolster skills in each domain, as well as suggestions for professional referrals.

Get Started

Ready to get started with the Well Screening?

Purchase the **Well Screening Starter Kit**, which includes an ebook manual and 25 screening codes (you'll use one code per screening).

After you redeem your initial screening codes, you can purchase supplementary codes for future screenings.
